Founding Software Engineer for LockDocs, early-stage Fintech, GTA based

Work with deeply experienced C level founders and take your career to the next level

This is a global software solution seeking to transform the customer experience across the financial services spectrum.

LockDocs is the client data platform that enables frictionless investing. Collecting and maintaining customer data is a massive pain point for the financial services industry and its customers. Our mission is to transform the way identity-related data is shared, stored, and governed by empowering customers to own and manage their digital identity in a privacy-preserving and highly secure manner. LockDocs is gaining significant market traction, and with the launch of its beta in June 2022, needs to fill this critical role to accelerate its ability to scale.

Reporting to the CEO, this is an immediate opportunity for a hands-on developer to manage and grow a team of developers, own the product roadmap and oversee customer onboarding.

Top candidates will have a passion for the Fintech space and already understand the transformational changes taking place.

What you will be doing:

- Working closely with the CEO, prioritize and determine the product roadmap
- Spec, plan and manage the execution of development work and be responsible for overall platform delivery
- Oversee the customer onboarding process
- Constant gathering of customer feedback and delving into analytics for purposes of continuous product improvement
- Working with big data to derive insights
- In a pinch, you can jump in and do some hands-on development work

Ideally, you will have:

- An enjoyment of a multi-faceted role that requires continuous learning, strong execution skills, and thriving on solving complex challenges

- A proven ability to manage people, multiple priorities and tasks in a dynamic work environment

- Able to set project milestones and meet critical deadlines

- Strong attention to detail and a relentless focus on continuously improving customer experience

- Strong understanding of JavaSript (preferably React.js and Node.js) environment or proficiency with at least one web development language

- 3+ years as a solutions and full stack development manager with an understanding of cryptography and ability to work collaboratively with our security expert

- 5+ years recent experience in software development and project management

- Proven experience with cloud environments (Preferably GCP and Firebase)

- Scrum Master Certification or equivalent
